

Secure AI Automation, Built Around Your Education Systems

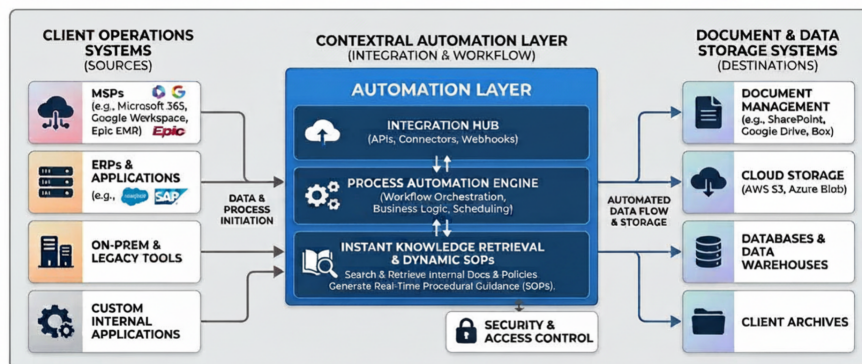

A private automation layer for schools & districts that can't afford to take chances with student data

The Challenge

Schools and districts lose hours to student records, enrollment data, and policy documents scattered across SIS, LMS, and legacy systems that don't talk to each other. FERPA and student-privacy concerns keep many from adopting public AI tools at all, while staff time and institutional knowledge keep slipping away.

How We Fit Into Your Systems

We deploy a private automation layer between the systems you already run and admin tools, where your data already lives. No migrations, no new platform for staff to learn, no student data exposure.

What We Automate For You

- **Student & records search:** instant retrieval across your modern & legacy systems
- **Enrollment & onboarding:** faster processing for students and staff
- **Compliance & incident reporting:** structured, auditable, and defensible
- **Dynamic policy SOPs:** living handbooks generated from your own documentation
- **Systems integration:** APIs, connectors, and webhooks across your existing infrastructure
- **Secure storage & archiving:** transcripts, records, and district archives

How We Work With Clients

1. **Discovery & Assessment:** We map how your team works today and where automation saves the most time without adding or taking anything out.
2. **Tailored Design & Engineering:** We use existing tools from your SIS/LMS or deploy our own inside your ecosystem to solve problems. No costly overhaul, no months of implementation.
3. **Private Deployment & Ongoing Support:** We roll out in phases with your team, then stay on as a long-term partner. We don't sell a tool and disappear.

Why Contextral?

Our team specializes in isolation systems and regulated industries, designing every solution without third parties or opaque vendors. We work with existing tools where possible, deploying our own on-prem or private-cloud systems only when compliance demands it. That experience helped Newark, NJ's Department of Public Works avoid an estimated \$3-4M in costs, and it's the same systems-integration experience we bring to education.
