

Secure AI Automation, Built Around Your Municipal Systems

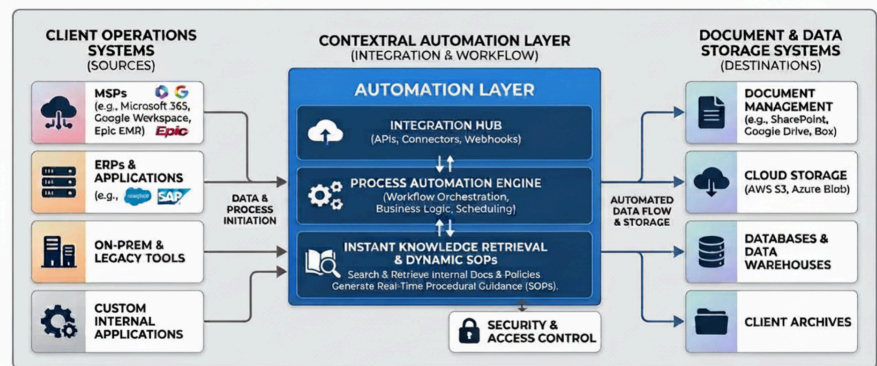

A private automation layer for law firms that can't afford to take chances with resident data

The Challenge

Law firms lose hours to scattered case files, legacy practice management systems that don't work together, and no internal team equipped to modernize safely. Privilege, confidentiality, and bar association rules keep firms from adopting public AI tools, while time keeps slipping away to manual document review and administrative work.

How We Fit Into Your Systems

We deploy a private automation layer between the systems you already run and where your client data already lives. No new platform for your team to learn, and no risk to attorney-client privilege or work product protection.

What We Automate For You

- **File & records search:** instant retrieval across practice management systems, and legacy tools
- **Workflow automation:** intake, conflict checks, scheduling, and process orchestration
- **Compliance & incident reporting:** structured, auditable, and defensible for bar and client audits
- **Dynamic SOPs:** living playbooks generated from your own firm documentation and precedent
- **Systems integration:** APIs, connectors, and webhooks across EHR, billing, and admin tools.
- **Secure storage & archiving:** patient records, imaging, and documentation

How We Work With Clients

1. **Discovery & Assessment:** We map how your clinical and administrative teams work today and where automation saves the most time, without touching patient care.
2. **Tailored Design & Engineering:** We use existing tools from your practice management/DMS platform or deploy our own inside your ecosystem. No costly overhaul, no waiting months until implementation.
3. **Private Deployment & Ongoing Support:** We roll out in phases alongside your staff, without disrupting daily operations, then stay on as a long-term partner. We don't sell a tool and disappear.

Why Contextral?

Our team specializes in isolation systems and regulated industries, like healthcare, designing every solution without third parties or opaque vendors. We work within your existing tools where possible, deploying our own on-prem/private-cloud systems when HIPAA compliance demands it; you always keep full data ownership. That same discipline helped Newark, NJ avoid an estimated \$3-4M in costs through automated reporting and analytics.
